zzz>>>>>> Marine Inc

American Marine Inc. was started in 1989 by a devoted aquaculturist who was passionate about quality and precision. Back in the late 80s, critical water quality parameters were mostly tested with colorimetric test kits. Some digital instruments were borrowed from university or laboratory sources with mixed results but always a high price tag. Expensive European aquarium equipment was always a disappointment when it finally arrived. Inexpensive "pens" gave no better results than color test kits and prematurely failed even when testing for approximate readings.

Using the most current technology and design, American Marine introduced *PINPOINT* Monitors, which have become the most respected line of digital instruments in the aquaculture business. American Marine was the first to introduce a 2 Year Warranty on each and every *PINPOINT* Monitor. For every purpose, from a goldfish bowl to a salmon hatchery, *PINPOINT* Monitors are called into duty every day because of their rugged design, precise readings and reasonable cost. Achieving the goal of "unique technology at reasonable prices," American Marine has sold *PINPOINT* Monitors on every continent. Each monitor is powered by a standard 9 volt battery that is available world-wide.
