**No Guarantee** The RW Series of propeller pumps succeed the very popular WP line. The RW pump has a different look to widen the flow and also make them quieter than the already silent WP's. The controller has some significant changes. Multiple pumps can now be controlled together in a master/slave format from a single controller. The controller will communicate with the designated slave pumps wirelessly, and can handle up to 8 slave pumps. Each slave pump's output can be adjusted individually, while the master pump controls the wave function. There is also a Feed button and a light sensor to reduce flow at night. The new RW series has 8 different selectable flow rates down to 10%, while the older WP only had 3 choices(100%/75%/50%). **Product**

#### Description

This compact pump is attached to the aquarium wall with magnets and protrudes only about 3 inches into the tank, making it very easy to hide. The pump includes a controller that can link with up to 8 other RW pumps wirelessly, and has several wave functions. The RW pumps can go down as low as 10% power, or 325 gal/hour, or as high as 100% power, or 3,250 gal/hour. Each slave pump's output can be adjusted individually, while the master pump controls the wave function.

The RW-15 is equivalent to the WP-40 in output, and similar in size, and quieter than the WP-40. **Features?**

- Easy installation and maintenance,Fixed with magnetic suction and absorption tray for selection
- Direction of wave can arbitrary rotation
- High performance,powerful water flow and low energy consumption.
- Adopt wear proof ceramic shaft can be used in a longer time.
- Intelligent wireless controlling system,can convert various wave patterns.
- Low voltage operation,safe and reliable.
- Suitable for fresh water and marine water.
